ABSTRACTED-PUB-NO: JP 09305839A

BASIC-ABSTRACT:

The machine includes a card interface (2) on which a memory card (3) is mounted. An electrically erasable/rewrittable first memory (5) stores a control program based on which sales is controlled. A second memory (4) stores the sales data produced during sales.

An identifier (1A) identifies the classification of the memory card mounted on the card interface and **updates** the data of the control **program** stored in the first memory, based on the sales data. A logic controller (6) writes the **updated** data of the control **program** in the first memory.

ADVANTAGE - Enables to **update** control **program** automatically.
